What's Happening: RubyLand Since April

Ruby

- Minor revisions released
  - 2.6.0-preview2
    - JIT
    - Use –jit on command line, only available when built with clang or gcc and compiler available at runtime
    - AST available
    - Endless range (1..)
      - Ary[2..] # everything but first 2 elems
      - (1..).each {|index| … } # confusing endless loop

Hanami

- v1.2.0 released
  - http hints
  - Js lib (hanami-ujs)
  - Dev error page
  - Callback for cli commands
  - Can use rack
  - Custom write operations on Repository

Rails

- Arel merged to active record
- Google cloud storage streaming support
- Transaction bugs
- Exception raised when column already defined in migration
- Time.zone.at has same sig as Time.at
- Resting from Railsconf

What Google Finds Popular
